

## Manual of The Micro-landscape Series

Bringing the Outdoors Indoors!

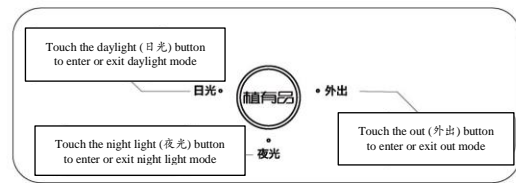

### Introduction

- ① Glass touch panel
- ② Main product
- ③ Planting pot for The Land Series
- ④ Tank
- ⑤ Output DC port for atomizer (The Realm Series)
- ⑥ Input DC port (power connector)

### Function description

#### Daylight mode

1. Touch the daylight button to enter daylight mode, the corresponding indicator will flash in white, and the ring indicator will display white breathing mode, and the light cycle will start from the current moment for 24 hours (If it starts at 8:30am this morning, it will be a cycle until 8:30am the next day)
2. In daylight mode, the timing cycle of the product's main light is: 10 hours on ↔ 14 hours off
3. During the 10 hours that the main light of the product is on, the timing cycle of the atomizer is: 10 minutes on ↔ 10 minutes off

### Function description

#### Out mode

1. Touch the out button to enter out mode, the corresponding indicator will flash in white light, and the ring indicator will display white breathing mode.
2. In out mode, the timing cycle of the product's main light is: 10 hours on ↔ 14 hours off.
3. Timed cycle of The Realm Series fan: 30 minutes on ↔ 30 minutes off.
4. During the 10 hours that the main light of the product is on, the atomizer of The Realm Series will start a total of 4 times to save water, the timing cycle is: 4.5 hours off-10 minutes on-10 minutes off-10 minutes on-4.5 hours off-10 minutes on-10 minutes off-10 minutes on.

#### Night Light mode

1. Touch the night light button to enter night light mode, the corresponding indicator will flash in white light, and the ring indicator will flash in red light.
2. In night light mode, press and hold the night light button to adjust the brightness.
3. Double-click the night light button to control the on/off of the atomizer of The Realm Series.

### Specification

<b>Material</b>	ABS plastic	<b>Input Power</b>	24V 1A
<b>Max current</b>	1A		
<b>Rated power</b>	24W MAX	<b>Rated Voltage</b>	AC100-240V
<b>Color temperature</b>	6000 K	<b>Color render Index(ra)</b>	Ra > 90
<b>Luminous flux</b>	420lm	<b>Illumination (lux)</b>	5000-30000lux
<b>Lighting method</b>	LED light source		
<b>Product size</b>	380 x 150 x 330 mm		
<b>Net weight</b>	3 KG		
<b>Package List</b>	Lighting part x1 Power adapter x1 Instruction manual x1 Tank x1 Accessory kit x1		
<b>Cautions</b>	<ol style="list-style-type: none"> <li>1. Do not place the product on a table more than 6° degree or on an unstable surface to avoid damage from slipping.</li> <li>2. Do not paint the product or use any chemicals, otherwise the lump may be discolored or damaged.</li> <li>3. The LED light source is not replaceable, when the light source expires, whole lamp should be replaced.</li> <li>4. Please input the correct voltage and current for the lamp.</li> </ol>		

#### Product warranty period description Giveaway is excluded from the warranty

Electronic accessories such as mist atomizer, water pump, external fan	1 year
Supplementary light equipment (including charger, DC cable)	1 year

### Eco-friendly Specification

Component	Lead (Pb)	Mercury (Hg)	Cadmium (Cd)	Hexavalent Chromium (Cr <sup>6+</sup> )	PBB	PBDE
Circuit Board Component*	×	○	○	○	○	○
LED light emitters	○	○	○	○	○	○
Plastic components	○	○	○	○	○	○
Metal components	×	○	○	○	○	○
Accessories**	×	○	○	○	○	○

- \* : Circuit board components include factor boards and constituent parts, such as resistors, capacitors, integrated circuits, connectors, etc.
- \*\* : Accessories include screws, nuts, expansion screws, power cords, external power drivers that are included in the product package.
- : The amount of the hazardous substance in all homogeneous materials of the component is below the limit requirement stipulated in GB/T26572 standard.
- × : The harmful substances in at least one of the homogeneous materials of the component exceeds the limit requirements stipulated in GB/T26572 standard.

**Environmental protection uses period of 10 years:** The harmful substances in this product will not leak or change suddenly during this period. The user will not cause serious pollution to the environment, or severe damage to human beings or property when using the product normally under the circumstances specified in the product.

Arrow recycling logo: This product can be recycled, after the expiration date or in malfunctioned condition, should not be arbitrarily discarded, please send to the formal recycling channels for disposal. Please check the local regulations on the treatment of old electrical and electronic products for the appropriate disposal method.

The above labels are in accordance with the Administrative Measure on the Control of Pollution Caused by Electronic Information Products (China) and its supporting SJ/T11364 requirements.

Long-term use of this product will not cause harm to human body, please rest assured to use.

Address: 2 Canberra Drive, Singapore

\* Please read the manual carefully before use and keep this manual for future reference.

## Installation instruction

### 1. Take out

After taking out the product, carefully remove the plastic wrap, wet wipes, and sponge used to hold the product in place.

Try to avoid shedding turf, soil, and stones.

### 2. Adding water

The Realm Series: slowly pour purified or filtered water along the stone wall and increase the water level to the water level mark Max.

The Land Series: Add water from the filling port

### 3. Adding stones

The Realm Series: Pour the decorative stones from the kit into the tank and cover the bottom evenly.

The Land Series: Spread the small stones in the kit evenly on the soil.

## Daily maintenance

### EXCHANGE WATER

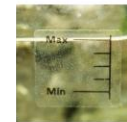

Under normal circumstances, this product does not need to change the water. After a long period of operation, algae (green/brown) in the aquarium are a normal phenomenon, there are two ways to deal with it:

1. Take out the algae and use sponge to wipe out the algae on the wall of the tank, you can also pump out about 60% of the water and replace the clean water into the tank to the water level.
2. When the product has been running for a week and the water quality is clean, grass shrimp or algae eating fish can be put into the water, which can effectively remove the algae and avoid frequent water changes.

### WATER REPLENISHMENT

In the daily operation of the product, the atomizer will volatilize the water in the tank, generally need to refill the water every 2-3 days, please follow the water level label to refill the water.

Do not exceed the maximum water level (Max) to prevent water from overflowing and causing water leakage; also avoid lower than the minimum water level (Min) to prevent the tank pump from running out of water and damage.

### WATER PUMP

The water pump works continuously 24 hours to ensure the full circulation of water in the tank, so that the ecological system in the tank can operate normally. Please make sure there is water in the minimum water level to avoid pump damage due to lack of water.

When there is a lack of water, air may enter the pump and cause noise. Please turn off the machine and add water to the water level, then turn on the machine and run for a few minutes.

◀ 9 ▶

## Daily maintenance

### MOSS

The best environment for moss to grow is: 15°C-25°C temperature, 80% humidity, weak acidic water with pH=5-6.5, and a ventilated environment.

	CAUSE	SOLUTION
Yellowing of the moss	Dry air, low humidity	Use a spray bottle for local humidification, once in the morning and once in the evening, and add water from the yellowing and dry area so that the water slowly penetrates down, until the plant gets better.
Molding of the moss	High temperature, no airflow	Place it in a ventilated area and turn on the device ventilation button. If not improved, replace the moldy part with new moss.
Blackening of the moss	Too much water, plant soaked in water	Elevate the moss base to avoid immersion in water

Moss replacement: If the moss is yellow and blackened to the extent that it is very serious, the moss must be replaced. Alternatively, you can take a little moss around your home or buy it from the Internet and replace it.

#### < Steps for replacement >

1 Removal of moss to be replaced

2 Laying new moss

3 Tidying up the new moss

4 Spraying water to moisture the moss

◀ 10 ▶

## Daily maintenance

### PLANT

#### Weed

After a period, weeds will grow in the soil, affecting the appearance and the normal growth of the plants. Please uproot the weeds.

#### Lush

Plants left unpruned for long periods of time become overgrown and spoil the overall appearance of the landscape, as well as blocking light from other plants and mosses

#### Pests

The landscape is made of akadama soil that has been sterilized at high temperatures and does not host insects; however, in a warm environment, insects can invade from the outside. Carbendazim can be purchased online and sprayed for pest control.

#### Withered

Plants need time to adjust to the new growing environment, plus the lack of air circulation during transportation, or due to regional climate differences, individual plants may not be in good condition. If the plants die, please buy new seedlings, and replant them.

## FAQ

### 1. Is it safe to use tap water?

Use neutral or soft water such as purified water, mineral water, or rainwater as much as possible. Avoid direct use of tap water, as it is harder and contains more impurities, which is detrimental to plant growth. If tap water must be used, please leave it outside under sunlight for a day or so to let the chlorine evaporate before use.

### 2. Why is there no fog? (The Realm Series)

The atomizer is automatically controlled by the program: start every 10 minutes and rest every 10 minutes to avoid rapid evaporation of water. When the water level is too high or the water becomes dirty, the fog volume will be smaller; when the water level is normal and the water is clean, the fog volume will return to normal.

If the atomizer does not spray, it is usually the following conditions:

- a) The water level is too low and the atomizer no longer spraying fog, the machine should be shut down and restarted to resume normal
- b) Atomizer functions normally but the amount of fog is too small or close to none. This is because the condition of atomizer is deteriorated after a long time, need to replace a new one
- c) Water vapor condenses into water droplets in the fog tube and blocked it, then the fog tube needs to be unclogged
- d) The fogging chamber is working normally, but the fan is not rotating, so the fog cannot be sent out. In this case, please check or replace the fan.

## FAQ

### 3. Can I feed fish or other aquatic pets in it?

Small tropical fish with low excretion and easy to take care of can be kept and fed with microorganisms in the tank. If the room temperature is too low, you need to purchase a small heating rod and put it in the water. Grass shrimps can be fed to effectively remove the algae in the water and better maintain the ecology. Please do not keep turtles, crabs and other pets that like to make holes, to avoid stones leakage

### 4. What to do when away from home?

1-2 days: Normal daylight mode, add water to the point marked Max  
3-6 days: Adjust to the out mode and add water to the point marked Max. In this mode, the atomizer of The Realm Series will work less frequently to reduce the rate of water consumption.  
7-10 days: Do not select any mode (if you have entered daylight mode, click the daylight button again), the top of the machine will be displayed in red light and only the pump will operate to keep the water flowing.  
Over 10 days: Please contact acquaintances for daily maintenance according to the manual.
